

BrightLife® Grow IUL Social Security Bridge

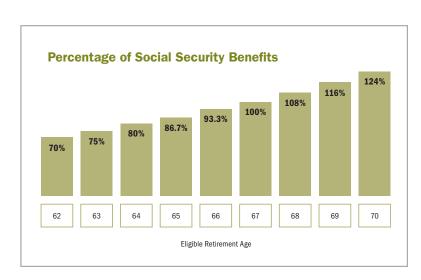

Most people will be eligible for 100% of their Social Security retirement benefits when they retire at "full" retirement age, which is generally around age 67. The Social Security benefits available to you are adjusted if you decide to take them earlier or later than "full" retirement age. For people who would like to retire early, but want to maximize their Social Security benefits by taking them later, life insurance can help.

Who can this strategy work for?

- Those who have a need for life insurance
- Want to retire earlier than normal retirement age
- Want to be able to delay Social Security benefits until age 70 to get maximum monthly benefits

The chart below shows the percentage of Social Security benefits that a person would be eligible for, depending on retirement age. As you can see, for people who want to retire even a little earlier than full retirement age, the amount of monthly Social Security income you would be eligible for is reduced. If, however, you can delay taking your Social Security benefits until a later age, such as 70, then you can get an increase in the amount of benefits you can receive.

Retiring early can mean up to a 30% reduction in Social Security benefits. Retiring later, however, can increase your benefits 8% a year.

Life insurance can help bridge the gap between an early retirement and taking a delayed Social Security benefit. By tapping any available cash surrender values during the "bridge" years, between age 62 and 70, you may be able to supplement your retirement income that would have otherwise been covered by Social Security.

Life Insurance: \cdot Is Not a Deposit of Any Bank \cdot Is Not FDIC Insured \cdot Is Not Insured by Any Federal Government Agency \cdot Is Not Guaranteed by Any Bank or Savings Association

Client strategy: Linda and Peter

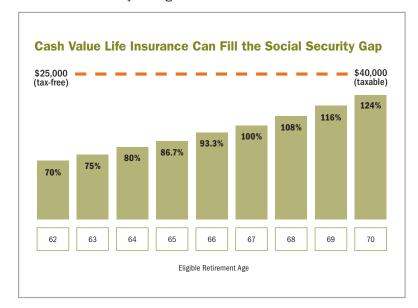

Linda and Peter are both 45 years old with two children and want to retire as early as possible. Based on today's Social Security benefits, Peter would qualify for 100% of his Social Security benefits if he retired at age 67. But, he wants to retire at age 62, a point where Social Security benefits would be substantially reduced.

Goals:

- Start retirement at age 62.
- Have a retirement income stream that is equal to what Peter would get from Social Security if he retired at age 67.
- Begin taking his actual Social Security benefit at age 70, in order to maximize the benefits available to him through Social Security.

The strategy

- Working with their financial professional, Peter decides to purchase a BrightLife® Grow Indexed Universal Life (IUL) policy on his life today. He will make payments to the policy for 16 years.
- When he retires at age 62, Peter may take out \$25,000 a year tax-free from his life insurance policy, which is equivalent to the after-tax amount of \$32,000, which is what Peter would have received if he retired at age 67. He will take distributions from the life insurance policy until he is age 69. The amount he may take from his life insurance policy is based on an interest rate of 6%, which is not guaranteed.
- When Peter turns age 70, he can stop taking his tax-free income from his life policy, and instead start taking his maximum Social Security benefit of \$40,000, which is taxable.
- Moreover, Peter now has a life insurance benefit for his wife and children in the event of his premature death.
- Along the way, Peter can always decide to hold off on retirement, and he may still have cash value in his policy to enhance his retirement beyond age 70.

Using life insurance,
Peter is able to retire
when he wants, and still
delay Social Security
benefits in order to get
the maximum amount
available to him.

Under current federal tax rules, you generally may take income tax-free partial withdrawals under a life insurance policy that is not a modified endowment contract (MEC), up to your basis in the contract. Additional amounts are includible in income. The IRS places a limit on how much money can go into life insurance premiums for the policy and how quickly such premiums can be paid in order for the policy to retain all of its tax benefits. If certain limits are exceeded, a MEC results. MEC policyholders may be subject to taxes on distributions on an income-first basis, that is, to the extent there is gain in their policies and penalties on any taxable amount if they are not age 59½ or older. Loans taken will be free of current income tax as long as the policy remains in effect until the insured's death, does not lapse, and is not a MEC. Please note that outstanding loans accrue interest. Income tax-free treatment also assumes the loan will eventually be satisfied from income tax-free death benefit proceeds. Loans and withdrawals reduce the policy's cash value and death benefit, may cause certain policy benefits or riders to become unavailable, and may increase the chance the policy may lapse. If the policy lapses, is surrendered or becomes a MEC, the loan balance at such time would generally be viewed as distributed and taxable under the general rules for distribution of policy cash values.

Why it works

- The BrightLife® Grow IUL can help provide tax-deferred growth and potentially tax-free supplemental retirement income, in addition to leaving a legacy to his family.
- Peter is able to retire at age 62 and still have an income stream equivalent to his Social Security benefit as if he
 had retired at age 67.
- Peter is now able to defer Social Security until age 70, which gives him the maximum Social Security benefit of \$40,000.
- Peter has the choice to change his retirement date and still have cash value and life insurance protection.

Peter's Age	After-Tax Social Security Equivalent from Policy	Cash Value	Life Insurance Benefit	Delayed Social Security Benefit at Age 70
62	\$25,000	\$150,254	\$340,387	\$0
65	\$25,000	\$97,895	\$265,387	\$0
69	\$25,000	\$10,961	\$157,778	\$0
70	\$0	\$11,975	\$153,157	\$40,000

This is a supplemental illustration authorized for distribution only when preceded or accompanied by a basic illustration from the issuer. The basic illustration contains values using the same underwriting assumptions as this supplemental at both guaranteed charges and guaranteed interest rates and contains other important information. The values represented here are for a \$200,000 BrightLife® Grow IUL policy on a 45-year-old male preferred non-smoker with an annual premium of \$7,200 for 16 years. The values represented here are non-guaranteed and assume current charges and a current interest rate of 6%. If guaranteed rates and charges are used, the policy would fail in year 19. Your values will be different based on your gender, age and health. Work with your financial professional to create an illustration that is tailored to your specific situation.

Other Considerations:

- * Withdrawal rates are subject to debate among planners. The withdrawal rate shown here may or may not be appropriate for your specific situation. In some instances, a lower withdrawal rate may be appropriate. In other instances, this may be an appropriate withdrawal rate.
- * This presentation is based on a hypothetical scenario. Past performance is not predictive of future performance. Your actual results will be different.
- * There is a surrender charge that will vary by type of policy. These charges run 15 years or longer, and will affect the available amount you have to withdraw or borrow from your policy at any given time. There are also cost of insurance and other policy charges that will impact your cash value. Work with your financial professional to understand the timing and limitations based on your overall goals and objectives.
- * How much life insurance you can purchase and the price you will pay will depend on medical and financial underwriting. Your results will vary based on your underwriting offer.
- * To make this effective, you will need a long-term buy and hold strategy with a cash value life insurance policy.

Life insurance is issued in New York and Puerto Rico by AXA Equitable Life Insurance Company (AXA Equitable), New York, NY 10104, and in all other jurisdictions by affiliate MONY Life Insurance Company of America (MLOA), an Arizona Stock Corporation, with main administrative office in Jersey City, NJ. MLOA is not licensed to do business in NY and PR. It is co-distributed by affiliates AXA Network, LLC (AXA Network Insurance Agency of California, LLC in CA; AXA Network Insurance Agency of Utah, LLC in Utah; AXA Network of Puerto Rico in PR) and AXA Distributors, LLC. AXA Equitable, MLOA, AXA Network, LLC and AXA Distributors, LLC are affiliated companies and do not provide tax or legal advice. Clients should rely on their own advisors for these matters.
